

Buemer partners with Align to overcome legacy data challenges

Client spotlight

- 1,000 employees
- Manufacturing
- Somerset, NJ

Client situation

- Beumer was live on UKG Pro and their contract with ADP was ending, requiring them to preserve historical data before losing access to it.
- They needed help extracting and converting 7 years of history.

Solution

- Align provided an end-to-end service and did the data extraction and conversion while the Beumer team validated the logic.
- Align acted on the client's behalf to take control of their ADP environment, compile reports, translate data and collaborate with ADP.

Results

- The historical data loads were successful
- All of the job, review, employee status, and check history data was successfully loaded from ADP to UKG.
- As a result, Beumer can now sunset ADP
